Recent Selected Projects

Artemis - The High Performance Data Hunter *Python, Redis, MySQL, Docker*
An automated high performance data scraper designed to hunt for data, structure the retrieved data, and input it into a database. Anything that fails to find the correct data is crowdsourced to allow the application to learn where to find the correct data.

WoPair *Elixir, Phoenix Framework* https://github.com/daVinciCEB/wopair
An application currently in development to allow people to find nearby users with like-minded preferences to workout with.
